### Abstract

Patterns of household financial asset ownership were investigated with data from the 1989 Survey of Consumer Finance. In terms of ownership associations between two assets, 22 pairs (61%) of assets showed positive effects on each other. For instance, owning a savings account increases the change of owning checking accounts and vice versa. Eight pairs (22%) did not affect each other in terms of ownership. Four pairs (11%) negatively influenced the ownership on each other. The remaining two pairs (16%) showed asymmetrical effects. These results may help planners better understand client behavior in owning various financial assets.
