▌ *Abstract*

Not at all did I expect the huge amount of positive and constructive feedback that I received on my short paper on Paul Feyerabend's philosophy which was published in issue 49(2) of The DATA BASE for Advances in Information Systems. More than two decades after his death, his provocative ideas are apparently still capable of triggering an inspiring academic debate. In this paper I will comment on the thoughtful rejoinders from Burton-Jones, Gregor, and Myers. I will also outline why, in spite of their wellfounded criticism, I still believe that Feyerabendian thinking is most appropriate for IS research-much more so than Popperian or Kuhnian. I will illustrate my reasoning by referring to several experiences with the academic double-blind peer review process. I will not only criticize academia's existing deficiencies, but also suggest a potential cure. My universal remedy is based on Feyerabend's philosophy of relativism, tolerance, and pluralism, which he not so cleverly disguised as anarchism. Recently, Chua et al. (2018) suggested changes in the rules of our academic review system. I do

## Recommendations

Further consideration of Feyerabend's ideas has potential value for information systems research. He continues in a long and commendable tradition of the scientist as a subversive and rebel - a tradition including Galileo, Franklin, Darwin, an...
