Abstract

BabyBondConnect (BBC) is a software package for trading goods with combined-value in a call market. The software was developed at Caltech under the direction of Dr. John O. Ledyard.The poster session will explain in detail the problem of trading combined-value goods, the mechanism used by BBC, and the technical specification of the software package. The poster will suggest further development of the BBC software package, the role software engineering and experimental economics can play in understanding traditional markets and electronic markets, and how new market mechanisms can be developed and tested.

Human and Artificial Agents in a Crash-Prone Financial Market

We introduce human traders into an agent based financial market simulation prone to bubbles and crashes. We find that human traders earn lower profits overall than do the simulated agents ("robots") but earn higher profits in the most crash-intensive ...

Information Technology and Trader Competition in Financial Markets: Endogenous Liquidity

This note integrates the models of Dewan and Mendelson 1998 DM and Kyle 1985, extending the DM analysis of time-based competition in financial markets to the case of endogenous liquidity. The results enable us to examine the link between informatio...

Portfolio Choice with Illiquid Assets

We present a model of optimal allocation to liquid and illiquid assets, where illiquidity risk results from the restriction that an asset cannot be traded for intervals of uncertain duration. Illiquidity risk leads to increased and state-dependent risk ...
