Bayesian Inference in Parameters of Gamma Distribution with Multiple Change Points

Ma Chaoqun Luo Jinhua Yang Yan Gao Renxiang Zhang Shiyong (International Business School, Hunan Univ, 410082, Changsha, P R China)

Based on bayesian principle, inference in structure change of parameters of Gamma distribution with multiple change points is investigated, and a general formula of Bayesian detection is given. By comparison among marginal posterior densities, detection and estimation of change points came out. Simulation results show efficiency of the approach presented.
