Abstract

China's economy has been growing rapidly since the late 1970s and is expected to maintain this momentum in the foreseeable future. Coupled with the biggest population in the world, there is tremendous growth potential for China's capital markets and financial services industry, both vital to the continued development of the economy. The contributors present research on all facets of China's markets including: stock and bond markets; futures and over-the-counter markets; regulatory issues; and the development and roles of financial institutions such as brokerage firms, banks and insurance companies. Also addressed are the recent performance of equity markets, the emergence of small and medium enterprises, and the state banks' bids to be listed in overseas stock exchanges. Taken together, the book sheds a welcome light on China's overall economic growth.
