Abstract:

The analysis of financial markets is a time-consuming complex, and error-prone process. The system described which is still under development, is an attempt to improve this process by partially automating the acquisition, analysis, and selection of financial market investments. The ultimate goal is to fully automate this activity. The current approach is to use technical analysis and fundamental analysis to determine when to buy, sell, or hold various instruments and artificial intelligence techniques to select a portfolio of stocks and/or options based on the goals of the system user. The tool uses a dynamic interface that is reactive to human interaction.< >
