Abstract

Firms are central actors in corporate governance and the key element of its national systems (and sub-national sectors) vary in way

governance system. Finance and corporate governance systems (FCGSs) vary among countries in their ability to meet these demands. By setting three dimensions of regime variation alongside the three corresponding dimensions of FCGS variation, patterns of relative and absolute technological advantage among economies can be largely explained — particularly when the focus is on nationality of firm rather than location of activity.

1.

Research reported here was funded by the European Union, in Project no. PL 98.0221 of the Targeted Socio-Economic Research Programme. I am grateful for their support and for the co-operation of interviewees; also for the comments of three reviewers and a Senior Editor.
