result of the transformation of financial markets and of financial journalism due to new economic thoughts, new communication theories, high-frequency trading and high-frequency sentiment analysis. As a case study of a market panic we show the impact of US news, UK news and Dutch news on three Dutch banks during the financial crisis of 2007–9. To avoid market panics, financial journalists may strive for greater transparency, not only on asset prices and corporate philosophies, but also on network dependencies in the worldwide financial markets.

Biographies

Jan Kleinnijenhuis is Professor of Communication Science at the Department of Communication Science of the Vrije Universiteit Amsterdam. His research deals with political and economic journalism, with the emphasis on news selection and news effects.

Friederike Schultz is Assistant Professor in the Department of Communication Science at the VU University Amsterdam. Her publications, among others in *Public Relations Review* and *Journal of Management Studies*, deal with crisis communication, corporate communication, corporate social responsibility, and new media. She worked as a corporate communication and new media consultant prior to her research career.

Dirk Oegema is Assistant Professor in the Department of Communication Science at the Vrije Universiteit Amsterdam. His publications, among others in the *American Sociological Review* and the *Journal of Communication*, deal with social movements, corporate reputation, election campaigns and news effects.

Wouter van Atteveldt is Assistant Professor in the Department of Communication Science at the Vrije Universiteit Amsterdam. He studies methods for automated content analysis and is the principal developer of the Amsterdam Content Analysis Toolkit (AMCAT, amcat.vu.nl). He is currently pursuing research – funded by the Dutch National Science Foundation (NWO-VENI) – into the role of media statements by politicians in the relation between press and politics.
