Modeling and forecasting cumulative average temperature and heating degree day indices for weather derivative pricing

| EANN 2009 | Published: 05 December 2010

| Volume 20, pages 787–801, (2011) [Cite this article](#)[Neural Computing and Applications](#)

Your privacy, your choice

We use essential cookies to make sure the site can function. We, and our 93 **partners**, also use optional cookies and similar technologies for advertising, personalisation of content, usage analysis, and social media.

By accepting optional cookies, you consent to allowing us and our partners to store and access personal data on your device, such as browsing behaviour and unique identifiers. Some third parties are outside of the European Economic Area, with varying standards of data protection. See our **[privacy policy](#)** for more information on the use of your personal data. Your consent choices apply to nature.com and applicable subdomains.

You can find further information, and change your preferences via 'Manage preferences'. You can also change your preferences or withdraw consent at any time via 'Your privacy choices', found in the footer of every page.

We use cookies and similar technologies for the following purposes:

- > **Store and/or access information on a device**
- > **Personalised advertising and content, advertising and content measurement, audience research and services development**

[Accept all cookies](#)[Reject optional cookies](#)[Manage preferences](#)

Finally, we provide the pricing equations for temperature futures on Cooling and Heating Degree Day indices.
