1.1 A.1 Proof of proposition 3.1

```
The problem of utility maximization can be written as (J(w)=\left(e^{rT}\right)^{1-\phi} u(w)) where u is defined as u(w)=\sup_{\left(t\right)^{t}} u(w)=\sum_{\left(t\right)^{t}} u(w)^{t} {tilde(w)}  (w)}E[U({tilde(w)}_{1-\phi})]. end(aligned)$
```

We apply to problem (A.1) the duality approach developed by Kramkov and Schachermayer (1999, 2003). To this aim, we observe that the utility function U satisfies Inada conditions [equation (2.4) in Kramkov and Schachermayer (1999)]. Let V denote the conjugate function V of V of V denote the conjugate function V of V of V denote the conjugate function V of V of V denote the conjugate function V of V denote the conjugate function V of V of V denote the conjugate function V of V of V denote the conjugate function V of V of

The random variable \(L_{T}\) in (A.2) is the Radon-Nikodym density of a probability measure equivalent to \(\{\mathbb {P}}\). In fact, Theorem 2.3 in Delbaen and Shirakawa (2002) applied to \(S^{DS}=Y,\) \(\rho^{DS}=0.5,\) \\(\,r^{DS}=b>0,\ \sigma^{DS}=2 \cdot (\cosh),\) \(\mu ^{DS}=b+2a \cdot (\cosh),\) and \(\theta^{DS}=a\) implies that \(\eta_{T}^{DS}=L_{T}\) is the Radon-Nikodym density of an equivalent probability measure \(\{\hat{\mathbb {Q}}}\}\) equivalent to \(\{\mathbb {P}}.\) Girsanov's theorem implies then that

```
\label{eq:continuous} $$\left(2^{t}=Z_{t}-\int_{0}^{t}a\right)^{t}ds \end{aligned} $$ (A.3)
```

is a $({\hat Q}})\$)-Brownian motion. Thus,

Since $\(M_{t}\)$ has 0 drift in the Ito decomposition under $\(\hat{\mathbb Q})\)$, $\(M_{t}\)$ is a $\(\hat{\mathbb Q})\)$ local martingale. To conclude that $\(M_{t}\)$ is a martingale we define

```
\qquad \qquad \ \text{t}=\frac{M_{t}}{M_{0}}, \end{aligned}
```

which is a $({\hat Q}})\)$ local martingale as well, and show that $(\mathcal{z}_{t})\$ is a $({\hat Q}})\$ martingale. To this aim, we first observe that process $(\mathcal{z}_{t})\$ is a stochastic exponential. In fact, Ito formula implies that

 \qquad \$\begin{aligned} dM {t}=e^{\frac{a^{2}+a}{2}}int

1.3 A.3 Proof of proposition 3.3

In what follows, we will mainly work under the martingale measure \(\mathbb $\{Q\}$ \\) whose density with respect to \(\{\mathbb $\{P\}\}$ \\) is \(\eta \) in Eq. (2.3). We denote with \(Z_{t}^{\mathbb Q}\)-Brownian motion

```
\label{lighted} $$\left(a \right) Z_{t}^{\mathcal Q}=Z_{t}+\int_{0}^{t}\left(Y_{s}\right)ds. $$\left(A.10\right)
```

Before proving the result, we first list some technical lemmas.

Lemma A.1

Let $(L^{*}=\frac{L_{T}}{\hat L_{T}})$ where (L_{T}) is given by (A.2). Then \

```
{Q}}}{d{\mathbb{P}}}}{d{\mathbb{P}}}}{d{\mathbb{Q}}}{d{\mathbb{Q}}}{d{\mathbb{Q}}}
\{P\}\}\}=\frac{d{\hat Q}}}{d\hat Q}}, \end{aligned}
and from the definitions of (\cdot) in (2.3) and of L in (A.2) that
\qquad $\begin{aligned} L {T}^{*}&=\frac{L {T}}{\eta}=\exp \left( a\int a) = \exp \left( a\in
\{0\}^{T} \operatorname{Y} \{s\} dZ \{s\}-\operatorname{Ca}\{2\} \}\{2\} \inf \{0\}^{T}Y \{s\} ds+\inf \{0\}^{T
\{0\}^{T} \operatorname{Y} \{s\} dZ \{s\} + \operatorname{C}\{1\}\{2\} \in \{0\}^{T}Y \{s\} ds \right) \
\left( \left( a+1\right) \right) \left( 3^{T}\right) \left( s + \frac{1-a^{2}}{2}\right) 
\{0\}^{T}Y \{s\}ds\ . \end{aligned}$$
From the definition of (Z \{s\}^{\mathbb{Q}}) in Eq. (A.10) we get
\qquad $\begin{aligned} L {T}^{*}&=\exp \left( \left( a+1\right) \int
       \{0\}^{T} \operatorname{Y} \{s\} \left(dZ \{s\}^{\mathbb{Q}}\right) - \operatorname{Y} \{s\} ds\right)
```

```
 \begin{table}{0cm} $$ (A.13) $$ (A.13) $$ since $$ (d{\tilde{P}_{t}={\tilde{P}}_{t}\sqrt{Y_{t}}\sigma_{t}dt+{\tilde{P}}_{t}\sigma_{t}dt+{\tilde{P}}_{t}\sigma_{t}dZ_{t}={\tilde{P}}_{t}\sigma_{t}dt+{\tilde{P}}_{t}\sigma_{t}dZ_{t}={\tilde{P}}_{t}\sigma_{t}dZ_{t} $$ {\sqrt{Y_{t}}}dZ_{t}^{\mathbb} {Q}}\) from $(2.1)$ and $(A.10)$. $$ Therefore, we look for the Ito representation of $$ ({\tilde{W}}^{*}$ (t)=E^{\mathbb} {Q}_{t}\sigma_{t}={\tilde{P}_{t}}\) to derive $$ (\psi^{*}$ )$. Denoting with $$ (L_{t}={E\left[L_{T}\right] \prive{F}_{t}\sigma_{t}},$) and $$ (\eta_{t}={E\left[\eta_{t}\sigma_{t}},$), we have $$ \prive{F}_{t}\sigma_{t}}$$ (\phi_{t})$$ (\phi_{t})$$
```
