Abstract

Preparers of financial statements are in a position to manipulate the view of economic reality presented in those statements to interested parties. This paper examines two principal categories of manipulative behaviour. The term ‘macro-manipulation’ is used to describe the lobbying of regulators to persuade them to produce regulation that is more favourable to the interests of preparers. “Micro-manipulation” describes the management of accounting figures to produce a biased view at the entity level. Both categories of manipulation can be viewed as attempts at creativity by financial statement preparers. The paper analyses two cases of manipulation. First, it describes a recent case of significant and successful lobbying against the accounting regulator in the USA. The second case examines some recent Spanish earnings manipulation to demonstrate the effects of biased reporting at the entity level. Both types of creativity are considered in an ethical context. The paper concludes that the manipulations described in it can be

regarded as morally reprehensible. They are not fair to users, they involve an unjust exercise of power, and they tend to weaken the authority of accounting regulators.
