 \qquad \$\begin{aligned} $V(x) = x + \Phi(V(x))^{top} [\frac{p}(V(x)) - V(x)^-]^+ - \frac{p}(V(x)). \end{aligned}$ \$

We will prove continuity by utilizing the closed graph theorem (see, e.g., [2], Theorem 2.58]) noting that Proposition 3.6 provides us with the condition that the clearing wealths map into a compact set. Theorem 4 of [34] immediately provides the monotonicity of the clearing wealths.

Fix \(x \in \mathbb {R}^{n+1}_+\) and let \(\mathcal {X} = x + [-1,1]^{n+1}\) be a closed compact neighborhood of x in the full Euclidean space \(\mathbb {R}^{n+1}\). Then we can define \(V^x: \mathcal {X}\rightarrow \mathbb {R}^{n+1}\) as the restriction (and possible expansion to negative terms) of the domain of V to \(\mathcal {X}\). The graph of \(V^x\) is given by:

\$\$\harin{aligned} {\tayt {granh}}\V^v - & {\tayt {hat{\V} \hat{\V} \in
