This is especially the case with the specifically independent individual models presented in his theory of marriage. Decision-making models assuming independent individual household members in the Becker tradition are reminiscent of models of labor markets in which firms and workers are independent decision-makers. As basis for econometric estimations, such models may be preferable to models imposing the structure of a game or a household welfare function.

Notes

1. The term “unitary” was coined by Browning et al. ([1994](#)).
2. References to Becker’s unitary model can be found in articles on a diverse range of applications of household economics, ranging from labor supply – such as Chiappori ([1988](#)), Chiappori et al. ([2002](#)), Chau et al. ([2007](#)) – to fertility (including Tiefenthaler [1999](#); Klawon and Tiefenthaler [2001](#)), care work (e.g.,
