But, does the design of the financial integration process promote the growth impact that is needed to achieve the Lisbon economic goal? The value of this chapter lies in merging the law-finance view and the finance-growth nexus. We collect descriptive evidence and combine it with theoretical and empirical research results on financial market integration.

The authors are indebted for helpful comments and input provided by the finance-growth nexus research group at the Europainstitut/Vienna University of Economics and Business Administration. The finance-growth nexus research group initially was supported by the Jubiläumsfonds of the Oesterreichische Nationalbank (project no. 8868).
