Abstract

The disciplinary rigidities that continue to separate the study of politics from the study of economics still stand in the way of a deeper understanding of the matrices and operation of post-Second World War global power. The crucial role of global bond markets in particular cannot be meaningfully understood without taking into account both power and product formation in financial markets.¹ This chapter attempts to pull disparate disciplinary threads together and comment on

the dynamics of contemporary imperialism by tracing the post-Second World War history of the international bond market.
