## About this book

---

Interchange fees have been the focal point for debate in the card industry, among competition authorities and policy makers, as well as in the economic literature on two-sided markets and on the regulation of market failures. This book offers insight into the economics of interchange fees. First, it explains the nature of two-sided markets/platforms/networks and elaborates on four-party schemes and on the rationale behind interchange fees according to Baxter's model and its later refinements. It also includes the debate about the optimum level of interchange fees and its determination ("tourist test"), and presents the original framework for assessing the impact of interchange fee regulatory reductions for the market participants: consumers, merchants, acquirers, issuers, and card organisations. The framework addresses three areas of concern in reference to the transmission channels of interchange fee reductions (pass-through) and the card scheme domain (triangle: payment organisation, issuer, acquirer). The book discusses the effects of regulatory interchange fee reductions in Australia, USA, Spain, and, most specifically, Poland. It will be of interest to policy makers, card and payments industry practitioners, academics, and students.

## Reviews

---

“This book is a must-read for regulators, academics and market participants.” (Central Bank Payments News, Vol. 2 (5), May, 2019)

“I would recommend this book to anyone with an interest in the issues surrounding interchange fees within payment schemes, especially those involved in impact assessments of interchange fee regulations.” (Harry Leinonen, Journal of Payments Strategy & Systems, Vol. 13 (2), 2019)

“Jakub Górka provides us with something invaluable, a comparative analysis of the effects of interchange fee regulations in various countries. Given the ongoing controversial debate about multilateral interchange fees and the coming review of the EU interchange fee regulation, this book is a must-read for regulators, academics and market participants. Górka covers some of the better known cases, Australia, the U.S., Spain and the EU. On top of this, there is an in-depth analysis of the regulatory measures introduced in Poland. While Górka is critical of some of the measures that have been introduced, he comes out with a generally favourable view of current regulations. His judgement is based on profound knowledge of theory as well as the institutional setting of the payment card market.” (Malte Krueger, Professor of Economics, University of Applied Sciences Aschaffenburg, Germany)
