## Abstract

This paper presents five points of view in the concept of financial law, which provide some powerful tools to study the different classes of financial systems and their characterizations. Each point of view exhibits some advantages for the generalization of determinate conditions required to a financial law and it makes possible the description of certain situations which are logical for an economic subject with a rational behaviour. These new points of view exhibit the relation of the financial laws with other mathematical concepts, as it is proved in this work.

## Riassunto

Sono presentati cinque punti di vista relativi al concetto di legge finanziaria. Essi forniscono alcune condizioni per studiare varie classi di sistemi finanziari e loro caratterizzazioni. Ogni punto di vista presenta vantaggi per la generalizzazione di determinate condizioni richieste ad una legge finanziaria e rende possibile la descrizione di alcune situazioni che sono logiche per un soggetto economico con un comportamento razionale. Sono infine presentate alcune conseguenze sulla scindibilità.
