Abstract

US mortgage markets have evolved radically in recent years. An important part of the change has been the rise of the “subprime” market, characterized by loans with high default rates, dominance by specialized subprime lenders rather than full-service lenders, and little coverage by the secondary mortgage market. In this paper, we examine these and other “stylized facts” with standard tools used by financial economists to describe market structure in other contexts. We use three models to examine market structure, an option-based approach to mortgage
