## Abstract

China's Western Development Strategy (WDS) has been carried out since 1999 with remarkable achievements, whereby Western China also experienced a rapid and stable development during the past decade. This paper analyzes policy actions and effects of WDS. The findings indicate that Western China's economic development has experienced a dramatic reversion after implementation of WDS, which to a certain extent, proves that WDS has played a significant role in promoting western regions' development. This paper also reveals some key constraints on Western China's economic development and then offers a set of policy ideas for the next stage of Western development.

<b>Item Type:</b>	MPRA Paper
