## Abstract

When a general partner raises capital for a real estate syndication, prospective investors should price-protect against incentives of the general partner to misrepresent project cash flows. In this study, I evaluate the structure of the general partner's compensation and specific project characteristics to determine if compensation structure can mitigate agency costs. Results indicate that front-end compensation is higher for the high reputation general partner and that the compensation structure varies with the degree of management expertise required and the financial risks of the investment.
