I am indebted to the executive management team of the Financial Ombudsman Service and to several anonymous interviewees for the generous hospitality that I was given, their time, and their invaluable insights into the organization's work. Early versions of this article were presented at the Office of Fair Trading and the University of Exeter GRIP seminar. I thank the participants of these seminars for their comments. I also thank Michael Barzelay, Anneliese Dodds, Christopher Hood, Adam Lefstein, Adam Samuel, and three anonymous referees for their reading and comments.

Abstract

Current research of third-party complaint handling institutions evaluates their success in providing redress and advancing service improvement. This focus is driven by a normative predisposition. In contrast, this study is based on an inductive, ethnographic research of the UK Financial Ombudsman Service. This inductive analysis is employed to develop hypotheses to guide future research on third-party complaint handling. It is suggested that current literature may have overlooked the role of third-party complaint handling schemes in managing what, from a professional point of view, are citizen-consumers' excessive expectations for redress. The normative implications of this tentative empirical claim are further discussed.
