The author thanks several people for helping to vastly improve this paper: specifically, Ed Kane for his many insights and suggestions, Armen Hovakimian for help with the empirical model, and Mark J. Flannery, the editor, and an anonymous referee for their patience and numerous helpful comments and suggested directions to pursue. Any remaining errors are the sole responsibility of the author. The author thanks the University of Western Ontario for allowing the use of its *TSE Western Database*.

Abstract

This paper confirms that adopting explicit deposit insurance expanded risk-shifting incentives for Canadian Banks and Trust Companies. By transferring responsibility for monitoring non-systematic risk to the Canadian Deposit Insurance Corporation (CDIC), deposit insurance eliminated the compensation previously paid to large-block stockholder monitors. This transfer fueled a redistribution of insured-institution stock from poorly diversified large-block shareholders to diversified investors. Also, subsequent changes in market volatility support the hypothesis that CDIC insurance and the absorption of catastrophic risk it provided reduced systematic risk in the stock market as a whole even as it increased non-systematic risk in the banking and trust-company sector.
