	Abstract									
1		y assuming that	it is constantly an	equilibrium-	seeking and su	staining system	. The theoreti			, who implied that the economy can nerges from the characterization of
		ence, aggregate	profits equal agg							view in which aggregate demand pact of debt on system behavior and
	Minsky identifies hedge, speculative, and Ponzi finance as distinct income-debt relations for economic units. He asserts that if hedge financing dominates, then the economy may well be an equilibrium-seeking and containing system: conversely, the greater the weight of speculative and Ponzi finance, the greater the likelihood that the economy is a "deviation-amplifying" system. Thus, the FIH suggests that over periods of prolonged prosperity, capitalist economies tend to move from a financial structure dominated by hedge finance (stable) to a structure that increasingly emphasizes speculative and Ponzi finance (unstable). The FIH is a model of a capitalist economy that does not rely on exogenous shocks to generate business cycles of varying severity: business cycles of history are compounded out of (i) the internal dynamics of capitalist economies, and (ii) the system of interventions and regulations that are designed to keep the economy operating within reasonable bounds.
