## Abstract

**Context:** The global tobacco epidemic may kill 10 million people annually in the next 20–30 years, with 70% of these deaths occurring in developing countries. Current research, treatment, and policy efforts focus on cigarettes, while many people in developing regions (Asia, Indian subcontinent, Eastern Mediterranean) smoke tobacco using waterpipes. Waterpipes are increasing in popularity, and more must be learned about them so that we can understand their effects on public health, curtail their spread, and help their users quit.

**Objective:** To conduct a comprehensive review regarding global waterpipe use, in order to identify current knowledge, guide scientific research, and promote public policy.

**Data sources:** A *Medline* search using as keywords “waterpipe”, “narghile”, “arghile”, “shisha”, “hookah”, “goza”, “hubble bubble” and variant spellings (for example, “hooka”; “hukka”) was conducted. Resources compiled recently by members of GLOBALink were used.

**Study selection:** Every identified published study related to waterpipe use was included.

**Data synthesis:** Research regarding waterpipe epidemiology and health effects is limited; no published studies address treatment efforts. Waterpipe use is increasing globally, particularly in the Eastern Mediterranean Region, where perceptions regarding health effects and traditional values may facilitate use among women and children.

Waterpipe smoke contains harmful constituents and there is preliminary evidence linking waterpipe sn

varied, or the underlying conditions, including pulmonary disease, coronary heart disease, and pregnancy-related

complications. We and our partners store and access personal data, like browsing data or unique identifiers, on your device.

Selecting I Accept enables tracking technologies to support the purposes shown under we and our partners process

**Conclusions:** More scientific documentation and careful analysis is required before the spread of waterpipe use

and its health effects can be understood and rationally guided treatment and public policy strategies can be

implemented. You can manage preferences for cookies and other tracking technologies. Selecting Reject All or withdrawing your consent will disable them. If trackers are disabled, some
