### Abstract

During the recent financial crisis, major dealer banks – that is, banks that intermediate markets for securities and derivatives – suffered from new forms of bank runs. The most vivid examples are the 2008 failures of Bear Stearns and Lehman Brothers. Dealer banks are often parts of large complex financial organizations whose failures can damage the economy significantly. As a result, they are sometimes considered "too big to fail." The mechanics by which dealer banks can fail and the policies available to treat the systemic risk of their failures differ markedly from the

case of conventional commercial bank runs. These failure mechanics are the focus of
