Presidential Voting and the Local Variability of Economic Hardship

Wendy K. Tam Cho and James G. Gimpel

Published/Copyright: April 9, 2009

Article ⌃

all enhance the Democratic vote share in areas critical to winning an Electoral College majority. Using Geographically Weighted Regression (GWR), however, we show the varying impact of these forces, controlling for previous Democratic voting, race, age, and income. Economic problems do not produce anything like a uniform response, and not merely because they are geographically uneven in their intensity. Some populations hit by economic downturn would not have voted for the incumbent's party under any circumstances, while others supported the in-party in spite of hard times. Even so, the combined weight of rising jobless claims and escalating foreclosures was sufficiently unsettling in key states to make for an early call on Election Night.

Keywords: presidential elections; the 2008 presidential election; economic voting; political geography; geographically weighted regression
