Abstract

Purpose

This study aims to examine the market returns of the Ukrainian stock and bond markets to determine whether they exhibit calendar anomalies including the January effect, weekend effect, and turn-of-the-month (TOM) effect. Ukraine provides an opportunity to examine the efficiency of an emerging market, adding to the extensive body of research on calendar anomalies.

Design/methodology/approach

Regression analysis is used to examine the relationship between January returns vs non-January returns, Monday returns vs non-Monday returns, and TOM returns vs non-TOM returns. Non-parametric t-tests and Wilcoxon signed rank tests are also used to examine TOM returns vs the rest of the month returns.

Findings

There is no evidence of a January effect or a weekend effect in the Ukrainian stock and bond markets. However, our results support a TOM effect in the Ukrainian stock market. The mean daily TOM return is 0.35 vs 0.24 per cent for the rest of the month. Additionally, in 63 per cent of the months, the mean daily TOM return exceeds the return for the rest of the month.

Research limitations/implications

The data are limited to five-years of daily returns and two different Ukrainian indexes. Thus, the results could be
