# Off the Cliff and Back? Credit **Conditions and International** Trade during the Global **Financial Crisis**

#### Davin Chor & Kalina Manova

**WORKING PAPER 16174** 

DOI 10.3386/w16174

ISSUE DATE July 2010

**REVISION DATE December 2011** 

We study the collapse of international trade flows during the global financial crisis using detailed data on monthly US imports. We show that credit conditions were an important channel through which the crisis affected trade volumes, by exploiting the variation in the cost of capital across countries and over time, as well as the variation in financial vulnerability across sectors. Countries with higher interbank rates and thus tighter credit markets exported less to the US during the peak of the crisis. This effect was especially pronounced in sectors that require extensive external financing, have limited access to trade credit, or have few collateralizable assets. Exports of financially vulnerable industries were thus more sensitive to the cost of external capital than exports of less vulnerable industries, and this sensitivity rose during the financial crisis. The quantitative

crises and the potential gains from policy intervention.
