ISSUE DATE June 2018

We review the recent U.S. monetary policy experience with large scale asset purchases (LSAPs) and draw lessons for monetary policy going forward. A rough consensus from previous studies is that LSAP purchases reduced yields on 10-year Treasuries by about 100 basis points. We argue that the consensus overstates the effect of LSAPs on 10-year yields. We use a larger than usual population of possible events and exploit interpretations provided by the business press. We find that Fed actions and announcements were not a dominant determinant of 10-year yields and that whatever the initial impact of some Fed actions or announcements, the effects tended not to persist. In addition, the announcements and implementation of the balance-sheet reduction do not seem to have affected rates much. Going forward, we expect the Federal Reserve's balance sheet to stay large. This calls for careful consideration of the maturity distribution of assets on the Fed's balance sheet. Our conclusion is that the most important and

reliable instrument of monetary policy is the short term interest rate, and we discuss the implications of this finding for Fed policy going forward.
