section (e.g. adjusted 8 weeks OR: 1.23, 95% CI: 0.89, 1.70, and OR: 0.89, 95% CI:

0.65, 1.22, respectively) nor with assisted versus spontaneous vaginal delivery (OR: 0.99, 95% CI: 0.82, 1.20). Very similar patterns were observed at 8 months. Conclusions. Antenatal and postnatal back pain are common. Elective caesarean section does not protect against postnatal back pain. Neither emergency caesarean section nor assisted vaginal delivery increases the risk of postnatal back pain compared with spontaneous delivery.
