Abstract

Evidence is provided on the PPP hypothesis using a sample of 50 Spanish cities for a long time period through the application of panel data unit root tests. Although results suggest non-rejection of the PPP, short-run deviations – as measured by half-lives – indicate that real factors might be causing a slow rate of convergence to a common price index, even in highly integrated economies.

Acknowledgements

Josep Lluís Carrion-i-Silvestre acknowledges the financial support from the grant SEC2001-3672, and Tomás del Barrio and Enrique López-Bazo from the grant SEC2002-
