Acknowledgements

I am very grateful to my colleagues of the Financial Economics Section for their contributions, mainly to my PhD thesis director, Eliseo Navarro and codirector, Antonio Díaz and Gonzalo Rubio. Besides I acknowledge the financial support provided by Junta de Comunidades de Castilla-La Mancha grant PAI-05-074.

Notes

¹ To avoid the possible existence of multicollinearity between the explanatory variables, it is usually used some orthogonalization procedure. Following Lynge and Zumwalt ([1980](#)), Flannery and James ([1984](#)), Sweeney (1998) and Fraser et al . ([2002](#)), the market return has been regressed on a constant and the series of real interest and inflation rates using OLS (ordinary least squares) estimation. Thus, the effect of each factor is isolated and the movement that remains is captured by the residuals.

² I adjust stock prices by splits.

³ I take into account that the last day of the month for which I have information about prices must not be previous than seven days before to the last calendar day of the month.

⁴ These information for doing for this procedu the expected
