ACKNOWLEDGMENTS

The authors thank the University of Pittsburgh's Mascaro Sustainability Initiative (MSI) for their support of this project. MSI is aimed at initiating and nurturing research and education in the research thrust areas of green construction and sustainable water use. We appreciate the support and help of Castcon Stone Inc. as our case study. Castcon is one of the leading pre-cast concrete manufacturers in the United States. We also thank Pittsburgh's Green Building Alliance and the architectural firm Perkins Eastman.

Notes

¹New and old facility based on square foot comparison. There is one utility meter for both office and plant.

¹Total absences do not include excused with doctor's excuse or workers' compensation.

¹The ratio used to extrapolate data was changed to 25% building related and 75% production related.

²The ratio used to extrapolate data was changed to 75% building related and 25% production related.

³The productivity was changed to 270 pounds/hour for the new facility; and to 180 pounds/hour for the old facility.

⁴The pro
