# Abstract

As more US companies source tooling development and manufacturing overseas in countries like China and Taiwan, are the need and primary drivers for product platforms diminishing? As tooling cost is reduced to a very small percentage of the total project cost, combined with availability of inexpensive purchased components and low labour

rates, th outsourd without families their costs a why con

products

major cost drivers is introduced and applied to both examples. Based on the evidence

from the examples presented in this paper, there appears to be little financial or functional benefit to develop product platforms that share common components or subsystems when these products are being manufactured offshore; however, even when considering outsourcing, platform-based product development principles can still yield tangible improvements in production costs over the life of the product.

Q Keywords: Product platform Product family Commonality Outsourcing Production costs
