Abstract

This article presents a single-machine lot sizing and scheduling problem with capacity constraints and allowing backorders. The problem is developed in a multi-stage process with explicit and implicit capacity constraints. An arbitrary lot sizing and scheduling algorithm is developed. The algorithm is compared with other solutions and the results are presented.

We Care About Your Privacy

We and our 848 partners store and/or access information on a device, such as unique IDs in cookies to process personal data. You may accept or manage your choices by clicking below, including your right to object where legitimate interest is used, or at any time in the privacy policy page. These choices will be signaled to our partners and will not affect browsing data. [Privacy Policy](#)

We and our partners process data to provide:

Use precise geolocation data. Actively scan device characteristics for identification. Store and/or access information on a device. Personalised advertising and content, advertising and content measurement, audience research and services development.
