Abstract

The application of group technology concepts to the design and operation of manufacturing cells has had a major impact on improving the performance of

multiproduct manufacturing systems. This paper presents a comprehensive review of the evolution of manufacturing cells and machine tools. The paper contributes to the understanding of the leading manufacturing systems and their impact on the manufacturing industry. The paper also presents a comprehensive review of the evolution of manufacturing cells and machine tools. The paper contributes to the understanding of the leading manufacturing systems and their impact on the manufacturing industry.

We Care About Your Privacy

We and our 843 partners store and/or access information on a device, such as unique IDs in cookies to process personal data. You may accept or manage your choices by clicking below, including your right to object where legitimate interest is used, or at any time in the privacy policy page. These choices will be signaled to our partners and will not affect browsing data. [Privacy Policy](#)

We and our partners process data to provide:

Use precise geolocation data. Actively scan device characteristics for identification. Store and/or access information on a device. Personalised advertising and content, advertising and content measurement, audience research and services development.
