We would like to thank Swisa Ariyapruchya and Jake Kendall for excellent research assistance, and Tuan Minh Le and the participants at the Public Finance World Bank Workshop for useful comments. Joshua Aizenman gratefully acknowledges the support of a COR grant, UCSC. Useful comments by two anonymous referees and the editor are gratefully acknowledged. Any errors are ours. The views expressed herein are those of the authors and do not necessarily reflect the views of the NBER.

Notes

1. Developing countries' reliance on easy to collect taxes has been explained by their limited institutional capacities, political instability, and polarisation. Studies explaining the reliance on easy to collect taxes in developing countries include Phelps ([1973](#)), Vegh ([1989](#)), Cukierman et al. ([1992](#)), Giovannini and De-Melo ([1993](#)), Aizenman and Guidotti ([1994](#)), Emran and Stiglitz ([2005](#)), and Gordon and Li ([2007](#)). The impact of globalisation on the pattern of taxation in the OECD countries has been the focus of Rodrik ([1998](#)); see also Tanzi and Zee ([2000](#)) and Ebrill et al. ([2002](#)). Space considerations limit our coverage of the large background literature dealing with public finance in developing countries. See Aizenman and Jinjarak ([2006](#)), Slemrod and Yitzhaki ([2002](#)) and Slemrod ([2007](#)) for a comprehensive survey and discussion.

2. This work is based on the initial analysis of the data which of the economic on the 'p' the tax

3. Low income countries are based on (http://w Cameroon Africa***, Zambia* ar*, Thailand Czech Republic ania**, Russian Federation***, Turkey***; Latin America: Argentina***, Bolivia**, Brazil**,

Chile***, Colombia**, Costa Rica***, Mexico***, Nicaragua*, Paraguay**, Peru**, Trinidad and Tobago***, Uruguay***, Venezuela***; Middle East and North Africa: Iran**, Morocco**, Tunisia**, South Asia: India*, Nepal*, Pakistan*, Sri Lanka**. High-income countries are: Australia, Canada, Cyprus, Denmark, Iceland, Israel, Japan, Malta, Norway, Slovenia, Sweden, Switzerland, United Kingdom.

4. India, Nepal, Pakistan and Sri Lanka.
5. A review of these methods can be found in Schneider ([2004](#)) and Alm et al. ([2006](#)).
6. See Fisman and Wei ([2004](#)) and Aizenman ([2004](#)) for fiscal implications of trade mis-invoicing.
7. Though interesting, there are no formal tests on the relationship between firm size distribution and tax evasion across countries.
8. Admittedly, Institutional Quality covers a wide range of aspects.
9. We should also note that there is another, hard to measure but easy to collect tax - government revenue from financial repression. Government can impose controls on international capital flows and domestic financial intermediaries as a form of taxation. The resultant wedge between effective external and domestic interest rates of public debt is t... at payments on gover... here are also potential... niorage because... nterest savings... vings increase... revenue is calculate... ancial repressi... etween the effec... may be negative... domestic interest... tic borrowin... a high positive... ancial repressi... from financial... dealing with

easy to collect taxes. Hence, these figures tend to understate the shrinking of easy to collect taxes in our sample.

10. See for example Anderson and van Wincoop ([2003](#)) and Helpman et al. ([2007](#)).

11. A simple fixed effect regression of gravity trade share on time trend shows a statistically significant increase of 0.3 per cent per year from 1980 to 1999.

12. Argentina, Cameroon, Chile, Colombia, Costa Rica, Hungary, India, Indonesia, Mexico, Morocco, Pakistan, South Africa, Thailand, Trinidad and Tobago, Tunisia, Turkey, Uruguay, Venezuela, Zambia and Zimbabwe.

13. The pan-European VAT system and tax base harmonisation debated in the European communities is a good example. See for example Financial Times ([2006](#)) and Financial Times ([2007](#)).

14. For example, a standard deviation of the Trade Openness for developing countries is 2.2 per cent. Using the coefficient estimate of Trade Openness on hard to collect taxes from [Table 2](#), which is 0.8 and statistically significant, the effect of a one standard deviation change of Trade Openness is to increase hard to collect taxes by $2.2 \times 0.8 = 1.7$ per cent of GDP.
