We Care About Your Privacy

We and our 880 partners store and access personal data, like browsing data or unique identifiers, on your device. Selecting I Accept enables tracking technologies to support the purposes shown under we and our partners process data to provide. Selecting Reject All or withdrawing your consent will disable them. If trackers are disabled, some content and ads you see may not be as relevant to you. You can resurface this menu to change your choices or withdraw consent at any time by clicking the Show Purposes link on the bottom of the webpage. Your choices will have effect within our Website. For more details, refer to our Privacy Policy. [Here](#)

application of special transcendental forms, such as asymmetric Gaussian and logistic (sigmoidal) functions, recently reported in the literature.

Acknowledgments

This work was developed over several years of interacting and constructive discussions with Bethany Bradley and Rob Jacob, both recent recipients of PhD degrees from Brown University. Professor Jack Mustard generously supplied the AVHRR-NDVI data and the hospitable venue in which this work was possible. Financial support was provided by Brown University and private sector partners with its Environmental Geophysics/Hydrology group.
