## **Abstract**

This article estimates the potential savings to the Medicaid program of using 1915c Home and Community Based Services (HCBS) waivers rather than institutional care. For Medicaid HCBS waiver expenditures of \$25 billion in 2006, we estimate the national savings to be over \$57 billion, or \$57,338 per waiver participant in 2006 compared with the cost of Medicaid institutional care (for which all waiver participants are eligible).
