ABSTRACT

The Residences at Wiley H. Bates Heritage Park is a 71-unit residential living facility in Annapolis, MD. The units are all-electric and are individually metered. They range in size from 578 square feet to 822 square feet. This article is observational and its purpose is to show the wide range in energy usage that occurs in residential living facilities. These findings may provide insight into the variability of usage that goes unobserved in master-metered multi-family facilities.
