## Abstract

This paper draws on the construct of brand experience to investigate the previously little-researched role of digital signage (DS) in retail atmospherics. Face-to-face between-subjects survey experiments were carried out at permanent DS installations in the UK: a pretest in a university ( $n = 103$ ), and a field trial at the Harrods department store, London ( $n = 437$ ). Findings demonstrate the effectiveness of DS sensory-affective advertisements (little functional information), whereas previous studies concern mainly cognitive content. DS content high on sensory cues evokes affective experience. DS ads that are high in factual information evoke intellectual experience. Evoked affective experience is more associated with attitude towards the ad and approach towards the advertiser than is evoked intellectual experience.

**Summary statement of contribution:** The findings indicate that incidental brand-related stimuli on DS can lead to evaluative judgments such as attitudes. Such stimuli can also work by evoking sensory and affective experiences and eliciting approach behaviour towards an advertiser. Practical implications arise as 'affective' DS ads can increase shoppers' approach towards an advertiser and the store that carries the ads, especially in generating loyalty from first time shoppers.

**Keywords:**

digital signage

experiential message cues

customer experience

## Acknowledgements

We thank the editors and anonymous reviewers for many helpful suggestions, the Harrods store for access and ad production, and ROI Team and Brunel University for resources.
