displaced the socio-economic measures when they were included in the predictive logistic regression model for self-assessed respondent health. Objective home energy efficiency, measured by SAP ratings, was associated with health in the model independently of the subjective measure. The findings support other evidence that home energy efficiency makes an important contribution to the relationship between lower socio-economic status and poorer health, and document the combined relationship between objective and subjectively measured home energy efficiency and health.

Keywords:

- Energy efficiency
- fuel poverty
- socio-economic status
- health

Acknowledgements

The research was funded by the UK National Lottery Community Fund. The authors would also like to thank North Tyneside Council who managed some of the heating and insulation interventions, and Northern Electric who generously supplied low energy light bulbs for respondents. Responsibility for the views expressed in the paper rests solely with the
