Abstract

We discuss the fair valuation of Guaranteed Annuity Options, i.e. options providing the right to convert deferred survival benefits into annuities at fixed conversion rates. The use of doubly stochastic stopping times and of affine processes provides great

We Care About Your Privacy

We and our 842 partners store and/or access information on a device, such as unique IDs in cookies to process personal data. You may accept or manage your choices by clicking below, including your right to object where legitimate interest is used, or at any time in the privacy policy page. These choices will be signaled to our partners and will not affect browsing data. [Privacy Policy](#)

We and our partners process data to provide:

Use precise geolocation data. Actively scan device characteristics for identification. Store and/or access information on a device. Personalised advertising and content, advertising and content measurement, audience research and services development.

We thank the participants to the 27th AMASES Conference in Cagliari (Italy), the 8th IME Conference in Rome, the 7th Spanish-Italian Meeting on Financial Mathematics in Cuenca (Spain) and the 3 Conference in Actuarial Science and Finance in Samos (Greece), where earlier versions of this paper were presented, and the people at the University of Trieste (Department of Applied Mathematics), ETH Zürich (Department of Mathematics) and Bocconi University (IMQ) for helpful comments and suggestions. All errors are ours. We acknowledge financial support from the Italian MIUR.

Notes

¹We are grateful to Freddy Delbaen for clarifying these points.
