Abstract:

Financial markets perform many functions, but principal among them is to bring together buyers and sellers and to provide a mechanism for price discovery. Information technology has had a number of significant impacts on financial markets, enabling enormous increases in volumes and more sophisticated trading techniques, such as program trading and index arbitrage. Despite improvements, some large institutional investors identify shortcomings in today's markets that make the process of buying or selling large, block orders time-consuming and costly. To address these concerns, a new trading system, OptiMark, has been built around several innovations, including (1) a graphical user front end for depicting trading preferences, and (2) a back end built on high-performance computers that process expressions of trading interest
