## We Care About Your Privacy

We and our 899 partners store and access personal data, like browsing data or unique identifiers, on your device. Selecting "I Accept" enables tracking technologies to support the purposes shown under "we and our partners process data to provide," whereas selecting "Reject All" or withdrawing your consent will disable them. If trackers are disabled, some content and ads you see may not be as relevant to you. You can resurface this menu to change your choices or withdraw consent at any time by clicking the ["privacy preferences"] link on the bottom of the webpage [or the floating icon on the bottom-left of the webpage, if applicable]. Your choices will have effect within our Website. For more details, refer to our Privacy Policy. [Here](#)

This study was funded by a grant from the National Science Foundation. An earlier version of this article was presented at the 8th International Symposium on Society and resource Management, Bellingham, WA. The authors gratefully acknowledge the suggestions of the anonymous reviewers and editors.

## Notes

- 1 This approach parallels the grounded theoretical framework of Glaser and Strauss (1967). We thank the anonymous reviewer for providing this linkage.
- 2 The quantitative phase of the study involved the use of the information from the semistructured interviews to frame questions for inclusion in a mail, multiwave survey with streamside landowners on the study stream segments. The survey response rate was 76% (for details see [Dutcher 2000](#)).
- 3 The findings from the 40 semistructured interviews reported here were used to guide the development of a mail survey sent to the remainder of the sampling frame. Descriptive statistics generated by the mail survey provided additional direct evidence of the streamside landowners' perceptions of the stream and its importance to explain and predict streamside landowner behavior. These results are reported by [Dutcher 2000](#).
