PCOS: PAB and Inflammatory Cytokines

# Evaluation of pro-oxidant-antioxidant balance (PAB) and its association with inflammatory cytokines in polycystic ovary syndrome (PCOS)

## Abstract

Chronic low-grade inflammation has been suggested as a key contributor of the pathogenesis and development of polycystic ovary syndrome (PCOS). To investigate the association between oxidative stress status and inflammatory cytokines in follicular fluid of 21 PCOS women compared to 21 women with normal ovarian function who underwent intra-cytoplasmic sperm injection. Concentration of IL-6, IL-8, IL-10, and TNF- $\alpha$  was measured using sandwich ELISA. Oxidative stress was examined by measuring total oxidant status (TOS), malondialdehyde (MDA), total antioxidant capacity (TAC), and thiol groups. PCOS women had an elevated concentration of MDA and TOS

compared to controls. Levels of TAC and thiolgroups were lower in PCOS compared to controls. PCOS patients had a higher concentration of IL-6, IL-8, and TNF-α compared to controls. Concentration of IL-10 was lower in PCOS compared to controls. Significant correlations were found between MDA and TOS concentration with TNF-α and between IL-6 and MDA, IL-8 and TAC, IL-10 and TOS levels and also between IL-10 and TAC levels. TAC and thiol groups were negatively correlated with TNF-α. Increased oxidative stress in PCOS is associated with inflammation which is closely linked. Inflammation can induce production of inflammatory cytokines in this syndrome and directly stimulates excess ovarian androgen production.

## Chinese abstract

目的：探讨PCOS患者卵泡液氧化应激、炎症反应及炎症细胞因子水平。方法：选取21例PCOS患者及21例健康女性，检测卵泡液IL-6、IL-8、IL-10、TNF-α水平，采用ELISA法检测血清MDA、TOS、TAC水平。结果：PCOS患者卵泡液MDA、TOS水平升高，TAC水平降低。PCOS患者血清IL-6、IL-8、TNF-α水平升高，IL-10水平降低。MDA、TOS与TNF-α、IL-6、MDA、IL-8、TAC、IL-10、TOS呈正相关，IL-10与TAC呈负相关。TAC与TNF-α呈负相关。结论：PCOS患者卵泡液氧化应激、炎症反应及炎症细胞因子水平升高，PCOS患者血清氧化应激、炎症反应及炎症细胞因子水平升高。

Keywords:

- Oxidative stress
- inflammation
- inflammatory cytokines
- follicular fluid
- PCOS
