Abstract

This paper considers Kaldor's 1964 proposal for a commodity reserve currency (CRC) as a serious alternative to the current international monetary system. It argues that a CRC would help to address the global imbalances that have led to the current crisis. The CRC would be a commodity-backed currency that would be used to settle international trade. It would be issued by a central bank and would be redeemable in commodities. The CRC would help to stabilize the international monetary system and would be a more effective way of dealing with global imbalances than the current system. The CRC would also help to reduce the demand from the periphery and balance growth between periphery and core countries.

Notes

¹Other variants of this scheme were proposed by Frank Graham (see Endres, [2005](#), pp. 85–93), and F.A. Hayek ([1943](#)).

²As the outflow of private long-term capital and government grants and capital transactions exceeded the US surplus in the balance on current account, the basic balance would be in deficit. This was financed by a fall in the US gold stock and an increase in the foreign holdings of dollar assets. Confidence that the US could continue to redeem dollar holdings in gold began to wane. In 1971 the US defaulted on this commitment when Nixon closed the gold window and made the dollar inconvertible into gold.

³For a discussion of the distinction between these two multipliers, see McCombie ([1985](#)).

⁴Devaluation is effective only when it does not lead to retaliation by others in a global sense.

⁵Williams ([1943](#)) argued that even under the gold standard, it was the strength of sterling at the height of the British Empire combined with Britain's accommodations with the periphery countries that stabilized the currency regime.

worth roughly \$66 billion, and cost \$4–6 billion to maintain (\$1.4 billion in storage costs and \$3–5 billion of spoilage costs based on losses in high-income countries). Total losses to all consumers from rising food prices in 2007 were estimated at \$270 billion (ibid., p. 127).

¹⁰Indeed such a plan may provide a resolution to the Doha round of WTO negotiations by neutralizing the ability of developed country subsidies to depress world prices.

¹¹The operation of the CRC would differ sharply between the initial build up period and the ensuing operation period; see Hart et al. ([1964](#)) for more details.

¹²Hart et al. proposed an initial fiduciary issue of \$5 billion and a separate \$5 billion bancor issue in exchange for gold, creating a bimetallic bancor standard. The assets that are attained in exchange for bancor that are not commodities could be used by the ICF to pay for storage facilities.

¹³Kaldor used this term to characterize the commodity reserve currency in a letter to Sidney Dell, 23 March 1963, cited in Toye & Toye ([2004](#), p. 221).

¹⁴Kaldor's recognition of procyclicality in commodity markets goes back to his 1934 microeconomic cobweb theory of fixed quantities and flexible prices with production lags. The extension to the macro-economy and global levels with primary and secondary markets made income and effective demand in the developed world the important variable.

¹⁵Hart ([1976](#)) proposed a 10% spread between the bid and ask prices at which the ICF
