We Care About Your Privacy

We and our 854 partners store and access personal data, like browsing data or unique identifiers, on your device. Selecting "I Accept" enables tracking technologies to support the purposes shown under "we and our partners process data to provide," whereas selecting "Reject All" or withdrawing your consent will disable them. If trackers are disabled, some content and ads you see may not be as relevant to you. You can resurface this menu to change your choices or withdraw consent at any time by clicking the ["privacy preferences"] link on the bottom of the webpage [or the floating icon on the bottom-left of the webpage, if applicable]. Your choices will have effect within our Website. For more details, refer to our Privacy Policy. [Here](#)

Notes

¹ 'H-share companies' refer to the Chinese companies which are incorporated in Mainland China and listed in Hong Kong. 'A shares' refer to the stocks issued by the domestic companies in Mainland China and are traded in RMB by domestic investors only.

² Both the Shenzhen and Shanghai Stock Exchanges are included.

³ We find that both the HSI and the H-share Index are highly cointegrated with the SHA. The cointegration test results are reported at the end of [Table 3](#). In fact, the two Hong Kong Indices, HSI and H-share index, are found to have a strong correlation of 0.86 in the sample period.

⁴ The unit root hypothesis cannot be rejected for any of the 29 stocks when no drift or trend term is included (Equation [1](#)). The same null hypothesis is rejected for 2 stocks only when the drift is included but not the trend (Equation [2](#)). The results for these two specifications are available upon request from the authors.

⁵ The results for $j = 3$ are available upon request.
