## We Care About Your Privacy

We and our 907 partners store and access personal data, like browsing data or unique identifiers, on your device. Selecting "I Accept" enables tracking technologies to support the purposes shown under "we and our partners process data to provide," whereas selecting "Reject All" or withdrawing your consent will disable them. If trackers are disabled, some content and ads you see may not be as relevant to you. You can resurface this menu to change your choices or withdraw consent at any time by clicking the ["privacy preferences"] link on the bottom of the webpage [or the floating icon on the bottom-left of the webpage, if applicable]. Your choices will have effect within our Website. For more details, refer to our Privacy Policy. [Here](#)

## Acknowledgement

The authors gratefully acknowledge funding from Solidaridad, The Netherlands, for the field research reported in this article.

## Notes

A commonly used balancing score is based on the probability of participating in the programme as determined by a set of observable exogenous characteristics (Rosenbaum and Rubin 1983). The propensity score (p-score) is estimated for each farm-household by using the regression's predicted probability of having FT certification. Considering the distribution of the propensity scores, we identify the regions of 'common-support'. These regions are set after eliminating the observations in the non-participant group with a p-score lower than the minimum p-score in the participant group, and the observations in the participant group with a p-score higher than the maximum p-score in the non-participant group.

Community health services cannot be allocated to other community activities. In the case of such allocation for such investment, a bank account must be maintained using community funds.

## Addit

## Notes

Ruerd Ruben

Ruerd Ruben (corresponding author) is Professor in Development Studies at the Centre for International Development Issues (CIDIN) at Radboud University Nijmegen in The Netherlands.

Ricardo Fort

Ricardo Fort is a researcher at the Grupo de Analisis para el Desarrollo (GRADE) in Peru.

Guillermo Zúñiga-Arias

Guillermo Zúñiga-Arias is a researcher at the International Centre for Political Economy and Sustainable Development (CINPE) at the Universidad Nacional in Costa Rica.
