and-large failed to correct for the risks of their population. In the wake of the global financial crisis, however, policies started to sharply diverge. While the Estonian government has relied on market mechanisms and private market actors to cope with the crisis, the Hungarian government engaged in far-reaching interventionist policies to unmake some of its devastating consequences for indebted house-owners. The paper explains its findings by the combination of different welfare state traditions and patterns of party competition.

ACKNOWLEDGEMENTS

Earlier versions of this paper were presented at the workshop 'Financial Integration vs. Economic Nationalism in the European Union: The sources and consequences of foreign bank ownership', 2-4 February 2012, Josef Korbel School of International Studies, University of Denver; at the Political Economy Research Group at CEU, and prepared for the APSA 2012 Annual Meeting, New Orleans, 30 August-2 September 2012, Panel 'Financial Integration versus Economic Nationalism in the European Union: The sources and consequences of foreign bank ownership'. I am indebted to the organizer and participants of the workshops and panel, and especially to Thilo Bodenstein, Kristin Makszin, Colin Crouch, Zsolt Enyedi, Rachel Epstein, Wade Jacoby, Juliet Johnson, John Zysman as well as two external reviewers for helpful comments. 2. The Visegrád countries are Hungary, Poland, and the Czech and Slovak Republics.
3. János Kádár was communist leader and General Secretary of the Hungarian Socialist Workers' Party from 1956 until 1988.
4. While housing could be purchased as early as 1969 in Hungary, many restrictions made it unattractive to do so (Hegedüs and Szemző, [2010](#)).
5. MDF (Hungarian Democratic Forum) was FIDESZ junior partner.
6. In Hungary, the role of commercial and other special banks are distinct. Mortgage banks underlie strict control, but they also have access to special privileges. There are three mortgage banks: OTP Jelzálogbank, then FHB which was set up by the government, and the Unicredit mortgage bank (Molnár, [2010](#): 14-17).
7. For Hungary, a study finds that: 'Between 2001 and 2007, households' exchange rate exposure changed by almost 10 per cent of GDP, as they assumed the majority of the foreign exchange exposure arising from the growth in external debt. In fact, they are the real foreign currency risk-takers' (Király et al., [2008](#): 230).
8. From 2001-2008, Hungary pegged its currency with a flexible band to the euro. After that, it turned to a floating exchange rate regime.
9. For instance, while Prime Minister FÉRENC Gyurcsány already back in 2005 issued a warning on his blog that it would not be good if foreign currency lending increased because of the exchange risk attached to it, opposition leader Viktor Orbán announced in the public that in 2006 that he would like to see a 10 per cent increase in foreign currency lending, as it was a decision that would be good for the economy.
10. This was the result of the causes of indebtedness.
11. In 2008, Hungary declared war on transnational corporations and a 10 per cent reduction in declared that he probably not by changing the cent study by Tarkiyan. The payment of utility bills than with mortgages.

12. I borrow this title from Kattel and Raudla ([2012](#)).

13. This argument runs somewhat against the influential thesis of Timothy Frye that party polarization on the left-right space hinders economic reforms (Frye, 2011). Further research is needed to establish whether my argument indeed holds in the area of macroeconomic and welfare policies.
